[Pages from RI Aerial Photos.pdf](#)

Thanks to you both.

Looking at the aerial photos, Office 3 appears to be slightly south and east of where Ed Grillot drew it. See the attached. The building shows up first on the 1975 aerial photo although it may have been built somewhat earlier and/or moved from a location slightly further to the northwest (the photos from the later 1960s and early 1970s aren't as clear). The building is last clearly visible in the 1988 aerial and is gone by 1993.

Thanks – also, I meant to type “‘behind’ Office 3”, not entrance 3.

That is one area, I think there are references to others.

Let me do some digging to make sure I find the correct data and information references

Sure, here's the portion of the Grillot deposition Exhibit 2 that shows drums south of the Entrance 3 office. The transcription of the deposition talks about drums dumped "behind" entrance 3 though, so where that might have happened in relation to the office is a bit unclear. The area of concern would be the area around the office down to the area marked "drums".

Laura, do you agree?

Hi Leslie and Laura,

Can you show on a figure the areas of concern with respect to the potential PCB contamination source areas mentioned in the comment below? I'd like to make sure that our understanding of those potential areas matches yours and evaluate whether it makes sense to add any locations during Phase 1a of the investigation to try and address those gaps.

In some areas, CRA has determined that there is not enough evidence of a release to do a soil investigation. For example, the large pond was listed as a potential source area in the DQO table and past transformer recycling areas have been discussed as potential PCB contamination source areas. The ground water sampling planned in upcoming phases must address potential contamination from these areas.

Thanks, Adam

Adam,

Attached is the write up of the items we discussed last Wednesday related to the Phase 1A outline.
